

FRANKLIN PRECAST

20 Park Drive, Franklin, NJ 07416

973-827-7563

WATER TIGHT GUARANTEE

All Franklin Precast septic tanks are produced with the same care and quality materials by our experienced and qualified production staff. Each tank is guaranteed to be structurally sound and watertight when it arrives at your job site. Upon arrival at your jobsite, our delivery technician will evaluate the installation site in order to insure a safe and adequately prepared site. All installation guidelines must be followed and all site evaluations must be approved to guarantee water tightness of your new Franklin Precast tank.

Once the site is approved, and the tank is set in place, water tightness testing can take place. Franklin Precast follows the standards for water tightness set forth by ASTM C 1227. Franklin Precast provides the service of vacuum testing on site for your convenience.

Franklin Precast will repair or replace any tank manufactured by Franklin Precast which fails to pass the vacuum testing due to a manufacturing defect in the tank. Franklin Precast is not responsible for repair or replacement of any tank damaged due to site conditions, or damage caused by any contractor or contractor activities involved in the installation of the tank.
